**DORUK OTOMASYON VE YAZILIM SAN. TİC. A.Ş.**

REF : SER-17/ 7731  
SUBJECT : REFERENCE LETTER

10.04.2017

ProManage field data collection system, which we have been using since 2010, was integrated with our ERP system and enabled full traceability and efficiency to be tracked digitally. In addition to standard applications such as downtimes, scraps, cycle differences etc., we can also make BOM control, competency control, material and product quantity control, call follow-up system etc. with the applications directly customized for our company.

With the production follow-up andon screens used in the workplaces, the personnel are able to follow the status of the production instantly and departments are informed immediately.

With the usage of ProManage's OEE and production reports, daily/weekly/monthly reports can be generated; so production processes can be analysed and necessary improvement actions can be taken upon these reports.

Thanks to the fast and effective solutions offered by Doruk Otomasyon, the system start-up and development processes were completed fast and smoothly and the system is being improved according to our requirements day-by day, upon our company's principle of continuous development.

With our kind regards,

**SERDAR PLASTİK**
